

Introduction

Today, the internet has millions of websites, ranging from stunningly beautiful to old-professor style websites. The latter style is most familiar with government school websites. My alma mater is a central government school which never looked at its website seriously. Its design looks pretty old as compared to the topnotch private schools in India. This project focusses on improving the appearance of my school's website.

Expected List of Features

- Responsive to different screens,
- Navbar with the school name and the links to other pages,
- Image Gallery,
- Footer with a site map,
- Announcements and Achievements section,
- Circular Section,
- Inline frame for showing school location on Google Maps.

Market Survey

- Many schools in India have beautiful websites designed by famous web designers. These websites use many different technologies,
- The navbar and header should not have any gap,
- Some websites had a button on the bottom-right corner for "Scroll to Top",
- Showing Alumni reviews for the school on the site gives an impressive view of the school.
